QUALITY STANDARDS EX-FACTORY PRICE

APPLICATION RANG

The outer packaging of various plastic particles, such as PA6, PA66, etc., the water permeability is less than 0.1.

Chemical raw materials with strict requirements on water permeability, easily absorbing water powder, etc.

If there are high temperature resistance requirements and toughness requirements, they are used as woven inner bags.

Do you have the following questions about the "aluminum foil ton bag"?

Low production capacity can not be delivered on time?

High price, the cost cannot be reduced?

Unstable quality and easy to break?
